Biomedical engineering graduate with laboratory experience, management experience, strong teamwork skills, problem solving abilities, and well-developed communication skills.

PROFESSIONAL EXPERIENCE

STABILITY BIOLOGICS – Quality Control Supervisor *July 2024 – April 2026*

- Created non-conformance reports (NCRs), conducted root cause analysis (RCA), and implemented resulting corrective and preventive action (CAPA) consistent with SOPs
- Applied design control processes and carried out continuous improvement for human allograft processing in a sterile environment using aseptic techniques
- Applied Six Sigma lean principles in an FDA-regulated manufacturing environment while maintaining current good manufacturing practices (cGMP)
- Managed and led a team of quality control and manufacturing personnel towards achieving productivity increases of 50%

TEXAS A&M UNIVERSITY – Biomedical Research Assistant *February 2023 – May 2023*

- Carried out a variety of biomaterial laboratory techniques including reagent preparation for polymer synthesis
- Performed mammalian cell culturing (specifically human cardiomyocytes) utilizing aseptic technique and pipetting skills
- Synthesized 3D electro-spun polymer scaffolds with reversible crosslinking chemistry
- Applied statistical methods to experimental results

TEXAS A&M UNIVERSITY – Mathematics Teaching Fellow *September 2019 – April 2020*

- Taught engineering students' problem-solving methods relevant to engineering calculus

UTSA – Biomedical Research Assistant *June 2019 – August 2019*

- Authored a project abstract on electrospun polymer scaffolds for tracheal wounds
- Performed mammalian cell culturing (specifically human T lymphocytes)
- Utilized a variety of biomaterials lab techniques and instrumentation
 - Polymer absorption and mechanical adhesion testing
 - Scanning electron microscopy for surface characterization
 - Aseptic technique and pipetting skills
- Presented research findings at the Biomedical Engineering Society Conference 2019

ACCENTURE FEDERAL – Salesforce Development Intern *February 2018 - May 2018*

- Developed and tested interactive web applications with a team of qualified developers
- Worked with databases and web programming in SQL Server and Java
- Created web applications using HTML, CSS, and JavaScript

EDUCATION

TEXAS A&M UNIVERSITY *BS Biomedical Engineering, 2023*

Capstone Design Innovation Award – Computerized System or Software Design

- Created an initial prototype for a novel computerized ureteroscope device
 - Interviewed industry experts to establish user needs and project scope
 - Utilized design iteration methods such as design failure modes and effects analysis (DFMEA) and established a design process control map
-
